

Educatalyst

Educatalyst is a **Learning Management System** which helps students and faculties of various organizations. Learners and teachers can communicate about the assignments within the platform and teachers can monitor students' progress.

Teachers can easily create online classes to complement the other classes they conduct. They can share learning materials with their students and these can be viewed and downloaded conveniently. In addition, they can create online assignments and also track students' progress and performance in the assignments.

Students can easily access the assignments and learning materials prepared by their educator. In addition, they can use the platform to communicate with the teacher and other students anytime.

I also propose the to Integrate the coding module by which we can Integrate the feature which will allow teachers conducting a coding test and assigning coding assignment to the students.

Project Tasks			
Task	Status	Start-Date	End-Date
